

Profile

I am an ambitious young professional with excellent communication skills and a sense for creative content. My native language is Dutch (Netherlands & Belgium) but I am completely fluent in English since I have lived in Australia and Canada. My past professional experiences include translating from English to Dutch, localization of in-game content and being in charge of localization quality assurance for the gaming industry. These jobs all have in common that they require a high attention for detail. For my next job I am looking for a challenging experience that perfectly coincides with my taste for adventure and imagination. I want to explore new horizons and combine these with a healthy interest in entertainment such as film, gaming and the music industry.
